- ## Why Linux?

  - A powerful command-line interface

  - Built for multi-user systems.

  - An enormous amount of software is freely available

- pwd – **p**rint **w**orking **d**irectory

```
[dahlo@kalkyl4 dir]$ pwd
/home/dahlo/glob/work/testarea/temp/dir

[dahlo@kalkyl4 dir]$ cd directory1/
[dahlo@kalkyl4 directory1]$ pwd
/home/dahlo/glob/work/testarea/temp/dir/directory1
```

Absolute/Relative paths

- All files and directories have a location, specified as their path
  - The root ("top") of the file system is accessed through /, e.g. "ls /" or "cd /"

  - An absolute path is specified from the root, e.g. /proj/g2018028/nobackup/

  - These paths are unambiguous and definite, always referring to the same location regardless of current working directory

- All files and directories have a location, specified as their path
  - A relative path is specified from the current working directory; "ls documents/data/files/"

  - These paths are relative to your current location, and will refer to different places depending on your current location (pwd)

Both relative and absolute paths are useful, you should understand both

Navigation Commands

- Summary
  - ls – **lis**t content of directroy
  - cd – **c**hange working **d**irectory
  - pwd – **p**rint **w**orking **d**irectory
  - Use them to explore absolute/relative paths

How do I log out?
   exit

   Exits only the current terminal

Good to Know Commands

- Summary
  - cp – copy a file
  - mv – move a file
  - less – view a file
  - nano – view and edit a file
  - rm – remove a file
  - head / tail
  - wildcards
  - tab completion – use it!!!
  - top – see active processes
  - man – manual pages
  - exit – Log out current terminal

how rename multiple files in linux

All   Videos   Images   News   Shopping   More   Settings   Tools

About 581 000 results (0,79 seconds)

However, **renaming multiple** or group of **files** quickly makes it very difficult task in a terminal. **Linux** comes with a very powerful built-in tool called **rename**. The **rename** command is used to **rename multiple** or group of **files**, **rename files** to lowercase, **rename files** to uppercase and overwrite **files** using perl expressions. Howto: Linux Rename Multiple Files At a Shell Prompt – nixCraft
https://www.cyberciti.biz/tips/renaming-multiple-files-at-a-shell-prompt.html ▾
Nov 26, 2005 - **Rename** command syntax. It is a faster way to group **rename files in Linux** or Unix-like system. Say hello to zmv for zsh. Say hello to mmv command. Examples: **Linux Rename Multiple Files** Using a Shell Script. POSIX shell **rename** all *.bak to *.txt. **Linux** Shell script to **rename files**. Perl Script To **Rename File**.

linux - How to rename multiple files in single command or script in ...
https://unix.stackexchange.com/.../how-to-rename-multiple-files-in-single-command-... ▾

ssh - Secure SHell connection (ssh)

ssh -Y <username>@rackham.uppmax.uu.se
   Ex:

      ssh -Y valent@rackham.uppmax.uu.se

     Terminal in Linux and OS X

     MobaXterm in Windows (http://mobaxterm.mobatek.net/)
     Putty also alternative, but not as good..

Laboratory time!
